

APPROVED

**Reimbursement
of off-label use
in Germany**

Physicians are free to prescribe a drug "off-label", i.e. in an indication not covered by its label.

However, before
SHI funds would
reimburse the cost of a
product used off-label,
the **G-BA decides on the
reimbursement for each
off-label indication
individually.**

**Gemeinsamer
Bundesausschuss**

An off-label experts group makes recommendations to the G-BA based on their assessment of the current scientific and medical knowledge.

The findings of this are then added to Appendix VI of the drug directive:

- Part A → Active ingredients with reimbursed off-label indications
- Part B → Active ingredients excluded from reimbursement in off-label indications
